

ARPAL'S CABLE-CATCH SYSTEM™

ARPAL'S CABLE-CATCH SYSTEM™

ARPAL'S CABLE-CATCH SYSTEM™ by SafetyZone™, one of the world's most advanced glass-protection systems, was created to prevent damage caused by explosions.

The System is installed on windows in existing buildings by first applying SafetyZone window films 12/24 mil thick, then anchoring cables to the building's structural support—without altering the appearance of the building.

And because installation doesn't require changes to the building's construction, its cost is considerably lower than other window-protection solutions.

ARPAL'S CABLE-CATCH SYSTEM. Maximum protection for today's world.

THE BENEFITS OF ARPAL'S CABLE-CATCH SYSTEM™

- The System is installed on existing windows and provides maximum protection without altering the appearance of the building.
- The System is constructed and approved for use in countries around the world.
- The System conforms to the GSA Class D requirements.
- The System is designed to resist environmental conditions for many years, without any routine maintenance.
- ARPAL'S CABLE-CATCH SYSTEMS have been installed at many secured sites around the world, with minimum disruption to the daily routines of the operations.

Arpal's Cable-Catch System's unobtrusive design provides maximum protection while windows remain fully functional.

Arpal's Cable-Catch System provides a fully integrated unit that's color-matched to the existing frame.
